6. Near Pointer

- The pointer which can point any byte data segment or segment number 8 is know as **near pointer**

- That is near pointer cannot access beyond the data segment like graphics video memory, text video memory, etc. Size of near pointer is two byte. With the help of segment node we can make any pointer as near pointer

Example of Near Pointer

```
#include<stdio.h>
    int main()
    {
       int x=25;
       int near* ptr;
       ptr=&x;
       printf("%d",sizeof ptr);
       return 0;
    }
